*Hiring Manager, Roblox Corporation,  
San Mateo, CA*

September 15, 2024

Dear Hiring Manager,

I am excited to apply for the Summer 2025 Software Engineering Internship at Roblox. Currently pursuing my Master's in Computer Science at the University at Buffalo, and with hands-on experience as a Full-Stack Developer, I am eager to contribute to Roblox's innovative platform and its mission to empower users worldwide.

At Colgate Palmolive, I worked with a team of engineers to develop scalable software solutions using Django, React, and Google Cloud, optimizing systems to support millions of concurrent users. I also gained significant experience in deploying and maintaining APIs and front-end solutions, leading to a 50

My passion for games and user-generated content makes this opportunity particularly exciting. Through projects such as a real-time chat application and a stock market prediction system, I have honed my ability to craft intuitive user experiences while working with industry-leading frameworks like Node.js and Python. I am eager to bring these skills to the fast-growing world of Roblox and work collaboratively to drive innovation.

Thank you for considering my application. I look forward to the opportunity to contribute to Roblox's continued success and to discussing how I can support your engineering team.

Thanks in advance!
